

## ABSTRACT

The present invention provides a compound represented by the formula (I):

(wherein

R<sup>1</sup> is a lower alkyl substituted by a lower alkoxy or a heterocyclic group, or a heterocyclic group;

R<sup>2</sup> is a lower alkyl optionally substituted by a phenyl;

10 and

R<sup>3</sup> is a lower alkyl optionally substituted by a halogen, a lower alkoxy or a phenyl, or a fused polycyclic hydrocarbon group), which is well absorbed orally, exhibits durability of good blood level and has potent calpain inhibitory activity.
